## **DETAILED ACTION**

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-5 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Fujiyama et al (US 4,460,794).

Fujiyama et al disclose a process wherein alkylbenzaldehydes are produced by reacting the corresponding alkylbenzene with carbon monoxide, in a reaction mixture comprising hydrogen fluoride (HF) and boron trifluoride (BF<sub>3</sub>) (col. 2, lines 44-50). The pressure in the reactor is maintained preferably at 10kg/cm<sup>2</sup> absolute (about 1Mpa). The molar ratio of HF to the alkylbenzene feedstock must be at least 5, preferably 7 or higher, and the molar ratio of BF<sub>3</sub> to the alkylbenzene feedstock is preferably 1.1 to 2.0 (col. 3, lines 5 to 28). The temperature of the reaction may be between –35 and 5° C (col. 3, lines 50 to 53). The raw material applicable to the process of Fujiyama et al may

Application/Control Number: 10/615,297

Art Unit: 1621

be mesitylene, wherein 2,4,6-trimethylenzaldehyde would be produced (col. 4, lines 3-18).

When the process taught by Fujiyama et al is conducted at a molar ratio of HF to alkylbenzene of 5, the instant claims are anticipated by the reference.

When the process taught by Fujiyama et al is conducted at a molar ratio of HF to alkylbenzene of 7 or more, the instant process is rendered obvious. A person of ordinary skill in the art would have been motivated to modify the ratio of HF to alkylbenzene, since, as suggest by Fujiyama et al at col. 3, lines 26-29, optimum molar ratios of HF and BF<sub>3</sub> to the feed alkylbenzene will depend slightly on the species of the feed alkylbenzene employed in the reaction.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sikarl A. Witherspoon whose telephone number is 571-272-0649. The examiner can normally be reached on M-F 8:30-6:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Johann Richter can be reached on 571-272-0646. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Application/Control Number: 10/615,297
